

Today we don't have to go to the sink for a cold glass of water. We turn to our refrigerator which dispenses our ice and cold water for us. But that doesn't mean however that the water is clean or healthy.

The **Arctic Supreme** is designed to clean the water that goes through your refrigerator like other ice maker filters. But, unlike older ice maker filters, we've kept up with new technology. It's larger size, when compared to other filters, means that the water that rushes through the Arctic Supreme has farther to go, filters for a longer period, and gets the job done even under the highest demands. The patented **Aquaspace®** compound behind your refrigerator means each glass is free of harmful contaminants and you're free of worry.

The system fits neatly behind your refrigerator and out of sight. It can even be used to clean the water on your boat or in your RV. When the filter is used up, this disposable filter cartridge can be replaced easily - costing you only pennies per gallon.

PRODUCT SPECIFICATIONS:

Size:	2 1/2" x 12" 1/4" FPT to accomodate most fittings
Media Weight:	Approximately 16 oz. of Aquaspace® compound
Capacity:	1,000 Gallons (3,785 Liters) or 12 months, whichever occurs first
Flow Rate:	0.75 GPM maximum recommended
Max Pressure:	125 PSI
Max Temp:	80°F
Efficiency:	The Aquaspace compound has been tested and certified by the National Testing Laboratories.
Filter Section:	Disposable

PRODUCT DESCRIPTION:

- ◆ **Patented *Aquaspace®* compound filter media removes Lead and 55 VOC's without removing essential minerals!**
- ◆ **Compact size; fits neatly behind most refrigerators**
- ◆ **Quality American parts and workmanship; no messy leaks or spills**
